

Doubling farmer's income is not just a necessity for farmers but a crucial driver for India's economic growth.

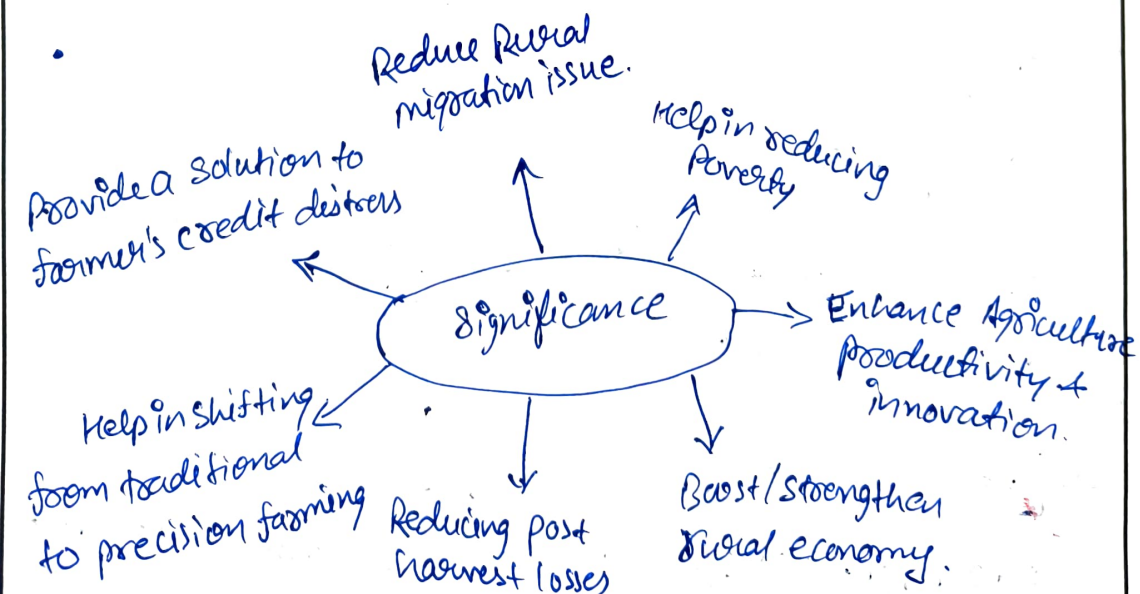

Candidate must not write on margin

India is among the top Agriculture producing country where agriculture is not only a livelihood sector but act as a

- ① High investment
- ② High productivity and
- ③ Global competitive industry

So, doubling farmer's income will be a crucial driver for India's economic growth.

→ Significance of doubling farmer's income :-

→ Poverty elevation:

As per tendulkar committee report

Percentage of population below poverty line in

Rural area = 25.7% , Rural population = 64%

and

Overall poverty = 21.9%

So doubling farmers income will strengthen
overall economic conditions.

→ Enhance Agriculture productivity

India can become Agriculture Superpower, as
farmer can earn more they can invest in better

① Technology

② Seeds

③ Irrigation

as India's productivity is 30% lower than
global average.

→ Reduce post harvest losses

FAO report 2023 - 92,000 crore losses are due
to lacking in ① infrastructure

② poor market linkage.

So, with farmers getting financially stronger will lead them to invest in infrastructure and storage facilities to reduce losses.

→ Shift from traditional to precision farming

WEF report 2022

↳ It says productivity can be increased by 30-40% with the use of precision farming.

- farmers having capital can shift to A.I driven precision farming.

→ Environmental concerns / sustainability

- NABARD Report 2023 : 60% of indian farmers uses traditional method of irrigation.

they can opt (i) drip irrigation

(ii) Sprinkler irrigation

these method will be helpful for water crisis problems.

- Indian farmers consumption of water for a Paddy crop cycle is = 3000 litre. as of China 300 litre.

these expenses are extra burden on farmers capital.

David Molden:- water for food, water for life

He states that smart irrigation system achieve 50% water conservation and 25-30% yield growth.

→ Strengthening Rural economy

World bank report 2023 :-

It states that countries with better credit access or strong financial support for their farmer, experiences higher agriculture growth and strong rural economy.

→ Hernando - de - Soto

It says financial support enables farmers to make land more productive and escape poverty cycle.

As per Sates poverty book Agri-culture:

Reconnecting people, land and nature, countries adopting high tech precision farming sees their

farmer incomes double as compared to traditional farmers,

Doubling farmers incomes will help in food security, enhance agriculture economy, reduce migration, unemployment and will make agriculture to be a key economic driver than another missed opportunity.
