

Qa) In year 2013,

X, NO of units = 7

total sales = 3.5 lakh

Y, NO of unit = 5

total sales = 4.5 lakh

Z, NO of unit = 8

total sales = 4 lakh.

∴ total unit = 20

total sales = 12 lakh

$$\text{Avg} = \frac{\text{total sales}}{\text{total unit}} = \frac{\cancel{12 \text{ lakh}}}{\cancel{*20}} = \frac{60000}{20} = 60,000 \text{ Rupees.}$$

• Average price of soap in year 2013 is 60,000 Rupees

b) Unit sold for X in,

Year 2012 = 6

Unit sold for X in,

Year 2011 = 5

∴ decrease in unit sold for X in 2012 over 2011

$$\text{is} = \frac{1}{6} \times 100 = 0.166 \times 100 = 16.66\%$$

c) total unit sold by Z in year 2013
= 8 units

$$\begin{aligned}\text{total unit sold in year 2013} &= X + Y + Z \\ &= 7 + 5 + 8 \\ &= 20 \text{ units.}\end{aligned}$$

$$\begin{aligned}\text{Percentage share of Z} &= 8 \times 4 \\ &= 32 \text{ lakh.}\end{aligned}$$

$$\begin{aligned}\text{total share of combined } X + Y + Z \\ &= 7 \times 3.5 + 5 \times 4.5 + 8 \times 4 \\ &= 24.5 + 22.5 + 32 \\ &= 79 \text{ lakh.}\end{aligned}$$

$$\begin{aligned}\therefore \text{share of Z in total in year 2013} \\ &= \frac{32}{79} \times 100 = 40.50\%\end{aligned}$$

d) Y sold maximum number of units
in year 2014.
i.e 7 units.
