"The Farmer is the only man in our economy who buys everything at retail, sells everything at wholesale and pays the freight both ways."

Kavita ~~was~~ is a young farmer living in a food poor remote village of Sitamarhi. Her husband migrated to Mumbai for bare ^{minimum} employment ~~as~~ ^{due to} agriculture ~~choice~~ in his marginalised land. She ~~does~~ farming on subsistence basis merely.

After some time, she came to know about various government schemes related to farming and rural livelihood. With the help of one JEEVIKA group she ~~started~~ ~~took~~ ~~start~~ started small ~~farm~~ pickles and dairy business under Mukhya - mautri Mahila Udyami Yojna. ~~She~~ Her mixed farming concept flourished. After some time her husband return back and joined wife's mix farming initiatives.

Now with better machinery, ~~and~~ Credit Seed Support and better market linkage, this family has established a

The onset of farming dated back to Neolithic era, where settled agriculture practice started. Later with the rise of civilisation and Mohajarpada, accumulation of land started ~~at~~ for power domination, resulting in unequitable distribution of lands.

Later on in medieval period feudalism rises and created feudal lords and pastoralist class in the wake of revenue collection of land. This led to exploitation and marginalisation of actual cultivators as well as small farmers.

In addition to this British Colonialism policy of highest ~~to~~ and unsustained for revenue led them a big blow. Frequent man-led famines are the story of exploitation of Indians.

In the era of Independence Indian Society was highly unequal or unjust. Farmers were playing as a landless labourer on land controlled by Absentee-landlordism. Bhudan Movement, Chakbandi and other land reforms reinstated lands to small and actual farmers. upto some extent, but not fully.

Some states like Bihar, UP there is a large number of farmers are small and marginalised one. And in addition to this, Simultaneous floods and draught distressing the condition. It has resulted into Distress migration and even sometimes upto farmer suicide. Therefore the land and agriculture reform is need of the hour for reconditioning of farmer income.

In Contrary to this, Agricultural reform called "Green Revolution" were efficiently flourished in Punjab and Haryana but in medium or large land holders farming. It led to the high yielding and production of crop which not only makes ^{exponential} farmer income growth but also resulted in the growth of

Primary and Secondary sectors in these states. Developed social lifestyle and industries are leading and contributing India economic growth.

Later on in 1990s Globalisation and Indian market opening, brought some development in traditional farming practices to at global practices. This resulted in high export of agro-products at global market and make India a largest exporter in rice.

However, this production ~~is~~ happening ~~in~~ only some specific north region ~~as~~ (Punjab, Haryana, West-UP). And most of area like Bihar, Odisha, Maharashtra (Vidarbha) are not contributing with same scale and are potentially untapped yet. Frequent draught of Vidarbha region has resulted in some most terrific incidence of farmer suicide in ~~the~~ India. These region specific reasons has necessitates the need of income growth and development of our farmers (the Anandata).

Departure from traditional farming and adaption of A.I driven precision farming has resulted in significant increase in productivity upto 30% in China and Netherlands.

In this regard, Government of India has also taken a positive step in increasing farmers income through high productivity, ~~at~~ at grass-root level. PM KRUSHI DHAN DHANYA Yojna, Atma-Nirbharta in PULSES, Fisheries expansion EEZ Utilization, MAKHANA Board in Bihar etc. are some initiatives taken by government to ensure development of Agricultural sector as 1st growth engine of Indian Economy.

In broader perspective, the core aim of all these government policies is to support farmers throughout the process ~~to~~ from FARM to THAL.

in pre harvest time high yield, climate resilient - drought resistance seed provision along with fertilizers subsidies will boost the confidence and reduce the load of farmers, which would result in higher production.

After, post harvest time, to reduce the post harvest loss, better infrastructural support in storage, cold chain system has been provided. In addition to this AI based forecasting has been initiated to set the produce at the equilibrium of demand and supply. This will result in exponential growth in farmers' income and reduce seasonal shocks and middleman's role.

Subsequently the most important initiative is market linkage. AI based technology driven, efficient market linkage system will ensure the export of agro-products at global level.

For this food processing units will take the leap in branding and standardizing the food products in global market. It will promote the non-farm activities in sustaining the seasonal shocks and employment.

Throughout the process from farm to table, Government initiatives based on P-P-P model, will grow farmer incomes and the combined multiples effect will lead to exponential growth of farmer income. ~~At~~ And the best outcome will be Employment generation beyond core farming activities. All these processes will bring down the DISTRESS MIGRATION and farmer suicides.

In last, after analysing the concerns of Indian farming system and initiatives to reform associated ^{with it}, we can say that doubling farming income is not just necessity but the crucial factor for India Economic growth. Government initiatives and public support can will create a beacon of hope in the eyes of crores of farmers, like for Karita, which can paved the path for women led economic development of India.
